```python
# Python program to convert
# text file to pdf file

from fpdf import FPDF

# save FPDF() class into
# a variable pdf
pdf = FPDF()

# Add a page
pdf.add_page()

# set style and size of font
# that you want in the pdf
pdf.set_font("Arial", size = 15)

# open the text file in read mode
f = open("./code_file"+*+".txt", "r")

# insert the texts in pdf
for x in f:
    pdf.cell(200, 10, txt = x, ln = 1, align = 'C')
```

```
# save the pdf with name .pdf

pdf.output("tanmay.pdf")
```
